# BEGINNERS ACL FOR AUDITORS

(OPHER JACKSON, 3 Days) 22 CPEs

## Seminar Focus and Features

Introduction to ACL is a three day program designed to help participants to become familiar with ACL's navigation and learn ACL's basic commands.

The program will show participants how simple data files can be imported into ACL and evaluated for their completeness and accuracy. Participants will be introduced to investigative techniques that can be performed with basic commands to identify anomalies in transaction streams.

The three-day program is a hands-on training program that uses an ongoing case study to reinforce concepts presented during the program. The program concludes with a final case study that ties in all of the concepts presented during the program so participants can feel confident they have the necessary skills to use ACL to achieve basic audit objectives when they return to their organization.

**Prerequisites:** Participants should have basic computer skills, including at least some experience using applications operating within the Microsoft Windows operating system.

**Learning Level:** Beginner

# ABOUT THE INSTRUCTOR

## Opher Jackson

Opher Jackson is a retired Executive Director from Ernst & Young. At Ernst & Young his primary focus was information management and data analysis including Data Governance. Opher held a leadership role in the National office where he helped start the firm's data analysis practice and created the firm's data analysis infrastructure. He was one of the firm's subject matter resources for the support, execution and design of audit sampling.

Opher developed and led data analysis training and provided national and global support. He helped create the firm's data analysis methodology used at audit clients; was part of an International Task Force that helped develop the ACL for Windows product sold by ACL Services, Ltd., and led, performed and evaluated data analysis and data conversion projects for clients across the country. Opher has more than 25 years of data analysis experience.
